Triarco Introduces Nopalean™

WAYNE, New Jersey – Friday, April 1, 2005 --Today Triarco announced the launch of their latest weight management product Nopalean™. Nopalean™ is a concentrate from the leaves of the prickly pear cactus (*Opuntia Ficus Indica*). The leaves or pads from this plant have been used for hundreds of years by the indigenous people of Mexico and the Southwestern United States making the product legal and available for use under DSHEA. The weight management component seems to be tied to the product's unique fiber. This particular fiber has shown an uncanny ability to bind with fats rendering them virtually undigestible. Nopalean™ contains an astounding 350 grams of this powerful fiber in every kilo. What's even better is the price. Nopalean™ is infinitely more affordable than Hoodia and its DSHEA status is known (unlike Hoodia). Most importantly, Nopalean™ is available for immediate shipment.
